Specification

GENERAL DESCRIPTION

The Alitherm 400 HD window system described in this manual is suitable for both replacement windows for existing buildings, and for installation into new buildings.

The system incorporates top hung & side hung window types with internally beaded vent frames suitable for eurogroove multi-point locking.

The multi-point locking options allow for off-set handles suitable for LifeTime Homes standards.

Applications:

Windows:

- Fixed windows
- Side hung open out casements
- Top hung open out casements

Corner assembly of Alitherm 400 HD is crimping only.

PROFILE SPECIFICATION

The window frame are constructed of aluminium alloy extrusion to BS EN 755-9 and BS EN 12020, extruded from 6063 T6 alloy. The internal and external extrusions are separated with a polyamide thermal break.

The external aluminium alloy extrusion is pre-treated and finished either:-

- a) Anodised to BS 3987: 1987, grade AA25 to a natural self colour.
- b) Polyester powder organic coating to BS 6496. Dual colour is available.

GENERAL MANUFACTURING

Outer and vent frames are made by cutting the frame profiles with accurate 45° mitred ends using Tungsten Carbide Tipped Saw Blades, operating at approximately 3000 rpm.

The corners are joined using the Alitherm 400 HD crimping cleats to form a cold forged corner joint (made by deforming small slugs of metal into the groove of the corner cleat). Small joint sealant ACSIL04 to be used at ends of profile prior to crimping. General purpose sealant must NOT be used.

The ends of transoms and mullions are profiled to fit the frame and fixed using self-tapping screws with small joint sealant ACSIL04 applied prior to assembly. General purpose sealant must NOT be used.

On polyester powder coated finishes, great care should be taken to avoid getting gap sealer on visible surfaces and should be removed as soon as possible with a clean cloth.

Care should be exercised when using products not supplied by Smart Systems Ltd as no responsibility can be accepted.

Specification

WINDOW DRAINAGE

As with all dry glazed systems, it is recommended that the window system is adequately drained and ventilated. Refer to drainage details in manual, if in doubt ask The Technical Department.

In order to get maximum performance and weather resistance it is recommended that drips are used over all vents.

OUTER FRAME MANUFACTURING INFORMATION

The outer frame members are cut with 45° mitred ends to the overall size required, measured to the longest point of the metal.

Prior to corner crimping the centre line position of any transoms or mullions should be marked on the outer frame members. Where the transom/mullion runs right through, it should be marked out on both jambs or head and cill members in pairs to ensure accurate alignment of the sections.

Using the marked centre line, Drill the transom/mullion fixing holes using a 5mm dia. drill bit.

Corners are formed by coating the cut faces to be joined with ACSIL04 small gap sealant. Into the mitred corner insert the cleat glue and the required corner cleats and, where required, the aluminium corner chevrons. The two mitred ends are then brought together and crimped. The small gap sealer ensures a permanent joint and guards against the ingress of moisture and joint movement. After crimping the corner joint, special care should be taken to ensure any excess sealer is removed from painted surfaces.

Transoms or mullions are cut with square ends to the sizes calculated on the cutting formula sheets. The ends are then profiled to allow them to fit into the outer frame. Special tooling is available on request to profile the end of transom/mullion.

Prior to fixing of transoms and mullions smear the cut ends with ACSIL04 small gap sealant. After fixing, special care should be taken to ensure any excess is cleared from painted surfaces.

Please note: Do NOT use general purpose silicon for mitre & transom/mullion joints.

Specification

VENT

Corners are formed by coating the cut faces to be joined with ACIL04 small gap sealant. In the mitred corner insert the cleat glue and the required corner cleats and chevrons. The mitred ends are then brought together and crimped. The small gap sealer ensures a permanent joint and guards against the ingress of moisture and joint movement. Care should be taken to ensure any excess sealer is removed from the surfaces.

The cutting sizes produce vent frames with a cavity of 16-17mm.

When fixing, the friction stays into both the outer and vent frame, care should be taken to ensure that holes are located on 'V' grooves in the aluminium extrusions.

INTERNALLY BEADED ADAPTOR FRAME

The internally beaded adaptor frame members are cut with 45° mitred ends to the overall size required, measured to the longest point of metal. Care should be taken when measuring and cutting the frame members as only nominal clearance is required when the assembled frame is fixed in the outer frame.

Corners are formed by coating the cut faces to be joined with ACIL04 small gap sealant. Into the mitred corner insert the cleat glue and a corner cleat and the required corner chevrons. The small gap sealer ensures a permanent joint and guards against the ingress of moisture and joint movements. Care should be taken to ensure any excess sealer is removed from painted surfaces.

GLAZING

All beads are cut to suit the glazing aperture on the fully assembled window for glazing either at factory or on site as required.

EXTERNALLY BEADED GLAZING

Glazing beads are fitted to openings by cutting the horizontal beads square to head and cill of each vent and fixed light area. Vertical beads are cut at 90° both ends. Insert bottom beads and two setting blocks to ensure glass will be centralized in vertical dimension of opening (glazing blocks must be full width of cavity to fully support glass or sealed unit), then insert top bead followed by side beads. Finish glazing by insertion of internal gaskets all round. Please note, PAS24 requires Securi-Clips for external glazing. Contact GT Windows Ltd www.gtwindowproducts.co.uk

INTERNALLY BEADED GLAZING

Glazing beads are fitted to openings by cutting the horizontal beads square to head and cill of each vent and fixed light area. Vertical beads are cut square at both ends. Insert bottom beads and two setting blocks to ensure glass will be centralized in vertical dimension of opening (glazing blocks must be full width of cavity to fully support glass or sealed unit), then insert top bead followed by side beads. Finish glazing by insertion of internal gaskets all round.

Telescopic Locking

Part Code	Rod Length (mm)	Number of Keeps	Sash Rebate Size ('A')	
			Minimum	Maximum
ACET4211	500-576	3 x ACET4218 2 x ACET4219	540	616
ACET4212	577-728		617	768
ACET4213	729-1032		769	1072
ACET4214	1033-1336		1073	1376
ACET4215	1337-1640		1377	1680

ACET4219

ACET4218

Croppable Locking

Basic locking Kit: ACET4271				
Locking Rod Part Codes	Dimension X	Number of Keeps	Sash Size	
			Minimum (mm)	Maximum (mm)
ACET4274	125.5	1 x ACET4218 2 x ACET4219	320	410
ACET4275	279	3 x ACET4218 2 x ACET4219	411	720
ACET4276	512		721	1185
ACET4277	748		1186	1655

Extension Rods

ACET4272: 300

ACET4273: 600

ACET4219

ACET4218

Notes:

- Sash locking can be further offset by 300mm with ACET4272, or by 600mm using ACET4273. Both require an additional ACET4218 keep per locking extension
- The sizes shown are based on a central handle position.
- Handles may be fitted off-centre if required.

Friction Hinge Stays - For Open Out Casement

Heavy Duty (Sterling) Stays (Use drill jig ACET4915)

Hinge Code Top Hung	Hinge Length (mm)	Max Vent Weight (kg)	Min Vent Height (mm)	Max Vent Height (mm)	Opening Angle (+/-2.5°)
ACINS10	262	40	315	640	50
ACINS12	313	50	640	800	50
ACINS16	415	65	800	1100	50
ACINS22	567	100	1090	1500	45
ACINS22W	567	100	1500	2000	20
ACINS26	680	180	2000	2500	20
Side Hung	Hinge Length (mm)	Max Vent Weight (kg)	Min Vent Width (mm)	Max Vent Width (mm)	Opening Angle (+/-2.5°)
ACINSSH10	262	38	327	660	85
ACINSSH16	415	55	450	838	60

Please Note:

1. Dimensions shown in table are sash sizes - not rebate sizes.
2. The minimum sash sizes for ACINS10 & ACINSSH10 can both be reduced to 281mm where cockspur handles are used.
3. Top hung height & side hung width sizes to be reduced by 2mm where size is 450mm or smaller.
4. Vents of 100kg must be fitted with ACINS09 cam adjustment devices, which are optional on lighter vents
5. Separate restrictors (ACINS30 & ACINS31) vent holding devices may be required to hold large vents in a selected ventilation position against variable wind pressure.

Friction Hinge Stays 16mm Stack (Standard)

Top Hung Windows

Top Hung	Type of Hinge / Stay	Max. Vent	Height	
		Weight (kgs)	Minimum	Maximum
ACETDHS08	Standard	12	200	350
ACETDHS10		16	275	400
ACETDHS12		20	350	550
ACETDHS16		21	500	780
ACETDHS20		26	700	1100
ACETDHS24		40	850	1300
ACETDTH24	Heavy Duty	50	850	1500
ACETDHS12R	Restricted	20	350	550
ACETDHS16R		21	500	780
ACETDHS20R		26	700	1100
ACETDHS24R		40	850	1300

Side Hung Windows

Side Hung	Type of Hinge / Stay	Max. Vent	Width	
		Weight (kgs)	Minimum	Maximum
ACETDHSSH12	Standard	22	320	600
ACETDHSSH16		24	420	700
ACETDHRSH12	Restricted	22	300	600
ACETDHRSH16		24	400	700
ACETME16	Egress	40	400	900
ACETDSH16	Heavy Duty	40	400	1000

Note1: Vent Height / Width is measured in mm.

Note2: Dimensions shown in table are sash sizes - not rebate sizes.

Note3: Top hung height and side hung width sizes to be reduced by 2mm where size is 450mm or smaller

Note4: Typical Dimensions based on Max. Size and Glass 30kg/metre

Section D

Statics

**For Wind Loading Limitations, Please Contact
The Technical Department - T: 01934 833100**

The position of the axes is an indication for the use and application of the moments of inertia (I_x and I_y) and the section modulus (W_x and W_y). We always choose the values of the axis perpendicular to the load to resist it.

- To resist the wind loads we use the values I_x and W_x .

EXAMPLE

$H = 175\text{cm}$

$W1 = 120\text{cm}$

$W2 = 100\text{cm}$

$P = 1250\text{ Pa}$ (wind pressure)

- 1) Determine I_{xx} value for the stiles (if required) using the Specification Wizard

$I_{xx} = 21.0\text{ cm}^4$

- 2) Determine suitability

Number	Picture	$I_x(\text{cm}^4)$ $W_x(\text{cm}^3)$	$I_y(\text{cm}^4)$ $W_y(\text{cm}^3)$

Corner Joint Details

To ensure accurate corners, we recommend the use of support blocks (by others) whilst cutting. Do NOT clamp directly onto the polyamide.

Notes

1. Degrease mitre sections
2. Cover mitred faces with ACSIL04
3. Apply ACSIL013 to cleat chambers
4. Apply ACSIL04 to any fractures formed by crimping to and to mechanical blocks to make watertight

Friction Stay Accessories

Please Note:

- 2 pairs per opening vent to be fitted to hinged side of window
- Each pair must be fitted with the hook centre within 100mm of each hinge

Please Note:

- 2 pairs per opening vent to be fitted to hinged side of window
- Each pair must be fitted with the wedge centre within 150mm of each hinge and in the centre of the window when sash height or width is greater than 800mm.
- When used with ACET516 and security takes priority, install ACET652 centre within 200mm of hinge.

ACET4285

Please note that for fitting each sash, we recommend using 4 x ACET4285, as shown in the images above.

Notes:

- Sash sizes can be increased by 300mm with ACET4272, or by 600mm using ACET4273. Both require an additional ACET4218 keep per locking extension
- The sizes shown are based on a central handle position.
- Handles may be fitted off-centre if required.

Bead Installation

QUICK-GLAZE BEAD INSTALLATION

1. INSTALL GLASS UNIT, ENSURING IT HAS BEEN PUSHED FORWARD TO ENGAGE COMPRESSION OF E GASKET.
2. BEGINNING WITH HORIZONTAL BEADS, LOCATE BEAD IN CLIP CHANNEL OF SASH AS SHOWN. INTEGRATED GASKET MAY REST AGAINST GLASS UNIT.
3. APPLY FIRM PRESSURE TO THE BEAD TO HOLD IN POSITION. THIS MAY CAUSE THE BEAD TO FULLY LOCK INTO POSITION.
4. USING A NYLON MALLET, TAP BEAD INTO CHANNEL WORKING FROM ONE END TO THE OTHER. PLEASE TAKE CARE AT THIS STAGE TO AVOID DAMAGE TO BOTH THE GLAZING UNIT AND THE BEAD.
5. REPEAT STEPS 2 - 4 TO INSTALL VERTICAL BEADS.

WE STRONGLY RECOMMEND INSTALLING ACET4280 GLASS ADJUSTERS WHEN USING QUICK-GLAZE BEADS. THIS WILL REMOVE THE NEED TO REMOVE BEADS IN ORDER TO ADJUST GLASS POSITION.

Jackable Bay Pole

Note: Installation to comply with relevant building regulations and British standards :-

- BS8213-4 Code of Practice for the survey and installation of window and external doorsets.
- Approved document A structure.
- Approved document C resistance to the passage of moisture.

Fully seal between the jack and sub cill with ACSIL04 so that water is not able to track through the 20mm hole.

When the cill does not form a complete water barrier then damp proof course should be used.
See approved document C section 5.9

Remove old mortar under the jack so that the 60mm base rests on a sound and level surface. When required use spreader plate under the jack and above the top cap.

Important Note:
All joints must be adequately sealed using ACSIL04
